

# What's the Flood and Earthquake Hazards Map?

## About the Flood Hazards Map

It's a map for quick evacuation in case of disasters such as flooding caused by heavy rains.

### Rivers with greater risks

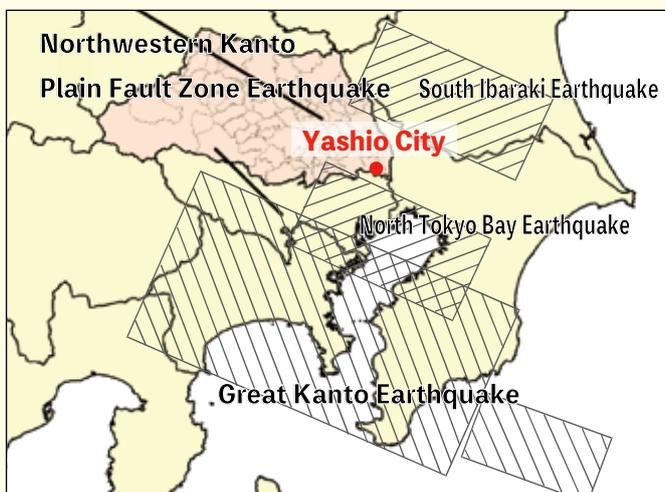

The following rivers are expected to flood based on estimations by the Government and Saitama Prefecture.

- Tonegawa
- Edogawa
- Arakawa
- Nakagawa
- Ayasegawa
- Nakagawa, Ayasegawa, Motoarakawa, Ootoshifurutonegawa, and Niigatakawa
- Shibakawa and Shinshibakawa

## About the Earthquake Hazards Map

We are currently creating three maps for the possible major earthquake in North Tokyo Bay: the Building Hazards Map, the Ground Shaking Map and the Liquefaction Risks Map.

### Expected risks of earthquakes

If a big earthquake hits North Tokyo Bay, Yashio City is expected to feel a seismic scale (shindo) of 6+ and receive the following damage.

- Affected buildings 4,189 (complete or partial destruction)
- Affected people 584
- Evacuees 4,545
